

NG-Test® AMR Range

NG-Test® CARBA-5

NG-Test® CARBA-5 is a multiplex lateral flow immunoassay for the **rapid detection** and **differentiation** of KPC, OXA-48, VIM, IMP and NDM in **less than 15 minutes**.

NG-Test® Blood culture prep allows the rapid and direct detection of the major groups of carbapenemases from **positive blood culture** samples in CPE bacteria using the NG-Test CARBA-5.

NG-Test® CTX-M Multi

NG-Test® CTX-M Multi is a multiplex lateral flow immunoassay for the **rapid detection** of the 5 most prevalent ESBL CTX-M Groups (1, 2, 8, 9 and 25) in **less than 15 minutes**.

NG-Test® MCR-1

NG-Test® MCR-1 is a qualitative lateral flow immunoassay for the **rapid detection** of colistine resistance, in **less than 15 minutes**.

NG Rapid Tests accurately identify the mechanism of resistance in 15 minutes, which allows an earlier revision of the empirical regimen.
