

# 10<sup>th</sup> AMR CONFERENCE

Novel Antimicrobials & AMR Diagnostics

**3 – 4 March 2026**

**Congress Center Basel | Switzerland**

# About the conference

The one-stop shop to catch up with the latest trends in the development of AMR products.

Being the proven successful forum to connect relevant AMR stakeholders from industry, SMEs, finance, hospitals, science, and policy, the AMR Conference provides a **360°-view on AMR innovation**. The two days packed with more than 20 sessions will cover the most urgent topics the AMR community is currently discussing:

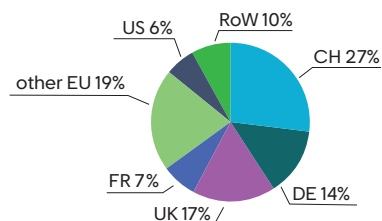

- How do policymakers take over their role in establishing most needed **pull incentives**?
- Which new **initiatives to push forward innovations** in antimicrobial therapies and diagnostics have been started?
- Which approaches take investigators to improve the **efficiency of preclinical models** as well as **clinical trial designs**?

The goal of the conference is to catch up with the latest trends in the development of AMR products. It is the central platform for all stakeholders to exchange views on innovation opportunities, development paths and alternative business models and has become **the leading meeting of the AMR community in Europe**. Together with major stakeholders, the participants explore further strategies to improve conditions for companies developing novel antimicrobials or AMR diagnostics.

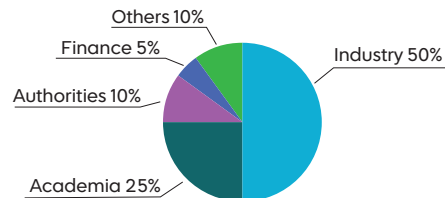

A special focus of the event is targeted at the perspective of innovative SMEs, their R&D pipeline, requirements for regulation and policy frameworks. In addition, the conference is a platform to discuss innovative strategies to improve R&D and clinical trials.
